

AI for Bharat Hackathon

Powered by **aws**

Team Name : Semi Colon Squad

Team Leader Name : Ayush Zodape

Problem Statement : Build an AI-powered solution that improves access to information, resources, or opportunities for communities and public systems.

Title: Nyaya Saathi — न्याय साथी

*Sunita is 28. Her husband beats her.
Her in-laws took her jewelry. She
doesn't know the law says she can't
be thrown out of her own home.*

Nyaya Saathi is an AI-powered legal rights and grievance drafting assistant that helps India's most vulnerable communities understand their legal rights and take action — in plain Hindi, without a lawyer.

Why Nothing Else Works — And Why We're Different

"Today" (THE PROBLEM)

Reality

1,800+ laws in impenetrable English jargon

Lawyers cost ₹500–5,000 per consultation

Existing tools (LegalKart, Vakilsearch) are paid, English-first, urban-focused

Generic ChatGPT has no Indian legal RAG — hallucinates Act numbers

Impact

80M eligible for free legal aid, only 15M access it

Daily-wage workers earn ₹300–500/day

65M Indians left without any legal awareness

Dangerous misinformation for vulnerable users

"With Nyaya Saathi" (THE SOLUTION)

Our Approach

Describe your problem in plain Hindi

AI identifies rights across 15+ Acts simultaneously

Auto-drafts RTI, FIR, complaints with proper legal sections

Cites exact Act & Section for every right

Free. Always. For everyone.

Why It's Unique

No legal knowledge needed

IPC + DV Act + Dowry Act in one response

First tool to generate grievance documents for low-literacy users

Independently verifiable — not a black box

Funded by serverless AWS (₹250/month prototype)

"Nyaya Saathi is the FIRST AI tool that converts a cry for help in Hindi into a legally valid complaint document — with law citations. Nothing else does this."

What Nyaya Saathi Does

Conversational Intake

Describe your situation in Hindi, English, or Hinglish — like talking to a trusted friend. AI asks follow up questions to understand fully.

AI Rights Identification

RAG searches 15+ Indian legal acts simultaneously. Identifies ALL applicable rights — DV Act, IPC, MGNREGA, RTI — with exact Section numbers.

Plain-Language Explanation

Every right explained at Class 8 reading level in simple Hindi. Not "Section 17 of PWDVA" — — but "आपको घर पे दूने का पुरा अधिकार है!"

Auto-Drafted Documents

Generates ready-to-submit RTI applications, FIR descriptions, formal complaints, and legal aid applications — with proper formatting and legal citations.

Legal Aid Center Finder

Finds nearest DLSA (free legal aid) by district. Explains who qualifies — women, SC/ST, disabled, workers, low-income families.

Responsible AI

Every response includes disclaimer + source citations. Refuses illegal queries. Says "I'm not sure — consult DLSA" when confidence is low. Zero PII storage.

"Each feature is designed for one user: a person who has never spoken to a lawyer."

Use-Case Diagram

"From 'Mere pati mujhe marte hain' to a formal complaint letter with legal citations — in under 30 seconds."

Wireframes

"Designed for accessibility. Hindi-first interface. No legal background needed."

Architecture — Built on AWS Serverless

Technology Stack — 8 AWS Services, 1 Goal

AWS Service	Role in Nyaya Saathi	Why This Service
Amazon Bedrock (Nova Lite / Claude 3 Sonnet)	Core LLM — situation analysis, rights explanation, document generation	Managed LLM access, strong Hindi capabilities, no GPU management, pay-per-use
Bedrock Knowledge Bases	RAG pipeline — auto-chunks, embeds, and retrieves legal text	Zero RAG infrastructure code; handles chunking + indexing + retrieval automatically
Amazon Titan Embeddings V2	Vector embeddings for semantic search over legal acts	Bedrock-native, optimized for multilingual text, strong Hindi-English
AWS Lambda (Python 3.12)	5 microservice functions — prompt chaining engine	Serverless, auto-scaling, pay-per-invocation, free tier covers prototype
Amazon API Gateway	REST API — routes frontend requests to Lambda	Managed throttling, CORS, HTTPS — zero backend server management
Amazon S3	Stores 15+ legal act PDFs + DLSA directory JSON	Pennies/month, durable, direct integration with Knowledge Bases
Amazon OpenSearch Serverless	Vector store for Knowledge Base embeddings	Auto-provisioned by Bedrock KB — zero configuration
Amazon EC2 (t3.micro)	Hosts Streamlit web frontend	Free tier eligible, simple deployment, sufficient for prototype

Cost Analysis — Social Impact at ₹0.50 Per User

Prototype Phase (Hackathon Demo)

Service	Usage	Monthly Cost
Amazon Bedrock (Nova Lite)	~1,000 requests	~\$2–5
Bedrock Knowledge Bases	Storage + queries	~\$1–2
Amazon S3	< 100 MB legal corpus	< \$0.01
AWS Lambda	~3,000 invocations	Free tier
API Gateway	~3,000 requests	Free tier
EC2 (t3.micro)	Streamlit hosting	Free tier
TOTAL		~\$3–7/month
		≈ ₹250–600/month

At Scale (100K Users/Month)

Service	Usage	Monthly Cost
Amazon Bedrock (Nova Lite)	~300K requests	~\$600–1,500
Bedrock Knowledge Bases	High volume	~\$50–100
Lambda	~900K invocations	~\$5–15
API Gateway	~900K requests	~\$3–10
EC2 / App Runner	Auto-scaling	~\$30–60
TOTAL		~\$700–1,700/month
		₹0.50–1.40 per user

“ ₹0.50 per user per month vs. ₹500+ for a single lawyer visit.

That's 1000x cheaper. This is why serverless AI changes everything for social impact.”

***"Justice delayed is justice denied.
But justice unknown is justice impossible.
Nyaya Saathi makes justice knowable."***
